Slit Lamp Photography with Meibography Function
Meibomian Gland Observation
Meibomian gland observation and documentation is possible when using the optional BG-5 or BG-4M background illuminators.

Live View
When using the EZ Capture™ software in conjunction with the DC-4, a real time live image will be seen on the monitor to facilitate centering and focusing. The live image can be used to show the eye condition to third party individuals for teaching and education. Sensitivity, shutter speed and white balance can be adjusted from the computer.

Video Capability
The DC-4 allows for easy acquisition of video clips of the eye movements without interfering with the examination.

Still Image with Auto Exposure (AE) function
By adjusting the shutter speed and sensor gain, the brightness of the image will be automatically compensated. As a result, the live image used for alignment and the final picture will have the same color balance.

Smart Capture Function
With a simple push of the joystick trigger, the operator can obtain a rapid series of images that are quickly saved for later revision and selection. The Smart Capture function minimizes failed images or blurry pictures, especially in children and non-cooperative patients.

Meibomian Gland Observation and Video Capability
Meibomian gland observation and video capability are possible when using the optional BG-5 or BG-4M background illuminators.

1. For meibomian gland observation, the following configuration is required:
   SL-D7/SL-D8Z+DC-4+BG-4M or SL-D701+DC-4+BG-5.
2. Subject to change in design and/or specifications without advanced notice.
In order to obtain the best results with this instrument, please be sure to review all user instructions prior to operation.
