Good Afternoon Jay,

I just wanted to let you know that I am very pleased with our purchase of the Topcon CV 5000 computerized vision tester. With standard phoropters, I was constantly plagued by difficulty in reading and transcribing the prescriptions from the phoropter to the exam sheet, not to mention consistent poor posture and difficulty in making fine adjustments to the cylinder axis. With the Topcon CV 5000, I am able to perform even the most difficult, arduous refractions extremely accurately with minimal effort, good posture, and best of all, the ability to print my results instantly.

The unit is reliable and very accurate and I am very happy we made the change to this instrument.

Best Regards,

A handwritten signature in black ink, appearing to read 'Robert Burke', is written in a cursive style.
